IMovies – Movie Ticket Booking System

Performance Testing

Test strategy, cases and evidence template

Project documentation based on the uploaded bookMyShow-main source ZIP

Prepared: 31 October 2026

Performance Testing

6.1 Testing objective

Validate the principal user journeys, API behavior, data persistence, authorization and responsiveness. The supplied archive does not contain a documented automated test suite or measured performance results; complete and record the tests below.

6.2 Test environment

Record laptop model/CPU/RAM, operating system, Node.js and npm versions, browser version, MongoDB deployment type, network conditions and test date.

6.3 Functional test cases

ID	Test	Expected result	Actual result
TC-01	Register with valid details	Account created; password stored as hash	To be tested
TC-02	Register duplicate email	Clear validation/error response	To be tested
TC-03	Login with valid credentials	JWT issued and user logged in	To be tested
TC-04	Login with wrong password	Login rejected	To be tested
TC-05	Load movie catalogue	Movie list appears	To be tested
TC-06	Open movie theatres/shows	Relevant theatres and shows appear	To be tested
TC-07	Select seats within limit	Selected seats reflected in booking flow	To be tested
TC-08	Try more than six seats	Selection/booking prevented	To be tested
TC-09	Complete booking	Booking record and booked seats updated	To be tested
TC-10	View booking history	Current user's bookings appear	To be tested
TC-11	Admin adds/edits movie	Movie data persists	To be tested
TC-12	Unauthenticated protected request	Request rejected	To be tested

6.4 Integration tests

Test React-to-Express API connectivity, Express-to-MongoDB persistence, JWT propagation, show-seat update plus booking creation, and error handling when the database is unavailable.

6.5 Performance tests

Measure catalogue API response time, show-detail response time and booking API response time at realistic classroom-demo load. Run repeated trials (for example 20 requests), record average and 95th percentile, and note environment. Do not insert fabricated timings.

6.6 Security checks

Verify passwords are hashed; JWT secret is not committed; protected routes reject missing/invalid tokens; users cannot access another user's booking history; admin actions enforce role checks; inputs are validated; CORS is restricted to intended origins.

6.7 Results sheet

For each test record: test ID, date, tester, input, expected result, actual result, Pass/Fail/Blocked, screenshot or Postman evidence, and defect ID.

6.8 Exit criteria

All critical demo-path tests pass; no unresolved blocker prevents registration/login, movie discovery or the chosen booking demonstration; known limitations are disclosed.

Accuracy note: This document describes the code and README found in the supplied ZIP. Items marked as recommendations or proposed tests are not claims that they have already been implemented or passed. Confirm all workflows on your laptop before submission.
